### From Italy to KI – a journey towards future cancer treatments

Paolo moved from Italy to Karolinska Institutet with a clear ambition: to contribute to the development of future cancer treatments. His journey reflects KI's international environment, where students from across the world come together in high-quality education and research. Through his studies, Paolo has had the opportunity to work close to the research frontier and develop key competencies in biomedical science. He emphasises the importance of an international perspective, where diverse experiences and backgrounds play a crucial role in addressing global health challenges. *"So, creating opportunities for students to firsthand understand challenges and communities is something that universities need to do, and I would always advocate for student mobility to go to other places to understand what it means to be the other person that may not fit in directly, especially in countries where you have a mainstream culture."* Katrin Kohl, co-chair of the UNESCO chair in reorienting education towards sustainability at York University, Toronto, Canada referring to SDG 4.7 in **Universities can be vehicles of societal transformation** (University World News)

### Från Italien till KI – en resa mot framtidens cancerbehandlingar

Paolo flyttade från Italien till Karolinska Institutet med en tydlig ambition: att bidra till utvecklingen av framtidens cancerbehandlingar. Hans resa speglar den internationella miljö som präglar KI, där studenter från hela världen möts i forskning och utbildning av högsta kvalitet. Genom sina studier har Paolo fått möjlighet att arbeta nära forskningsfronten och utveckla kompetenser inom medicinsk forskning. Han lyfter särskilt fram vikten av ett internationellt perspektiv, där olika erfarenheter och bakgrunder bidrar till nya lösningar på globala hälsoutmaningar. **Läs mer om Paolos resa på [ki.se](https://ki.se).**
